

ENHANCED SECURITY ASSESSMENT TRAINING

Building Intentional Security™

80% of executives admit their organizations have backed away from innovative business opportunities because of security concerns and over 50% believe security is not aligned with the business*.

Intentional Security™

Unfortunately, security professionals too often fail to provide the information business leaders need to make critical risk and budget decisions.

Intentional — Purposeful. Deliberate. Planned.
That's what security *should* be.

Executives are tired of security based on guess work.
Security practitioners are tired of firefighting.

ENCURVE'S **Enhanced Security Assessment Training** closes the gap between business and security.

Develop Defensible Assessment Findings and Communicate Business Impacts to Executives

The first step in security is assessing the current state of the security program and controls. Go beyond simple checklists, automated scans and canned reports to:

- Gain a deeper understand of security concepts
- Understand and develop business risk profiles
- Identify root causes of security issues
- Communicate risk and business impact to executives

Enhanced Security Assessment Training is designed for **any security practitioner** needing to communicate security and risk issues to senior management or clients.

Course Details:

- Taught by experienced security professionals
- Ideal for converged environments – equally applicable for IT and physical security
- Can be tailored to your specific requirements and taught on-site
- 4 or 5 day versions available
