

Building Intentional Security™ with Encurve's

INCIDENT RESPONSE CAPABILITY ASSESSMENT

80% of security professionals stated that "...security risks [are] either not known or only partially assessed."

If you don't understand the risks your business faces how can you prepare for a security incident?

Intentional Security™

Intentional — Purposeful. Deliberate. Planned.
That's what security *should* be.

Waiting until a crisis occurs to figure out how to react is a recipe for disaster.

What Would Be the Business Impact of a Security Incident?

- ✓ What are the major threats to our business?
- ✓ Would we be able to detect an incident?
- ✓ Are we required to investigate or report an incident?
- ✓ How would we communicate with shareholders, customers, the press and other stakeholders?
- ✓ Can we accurately measure losses?

Incident Response Considerations:

- ➔ The organization's threat profile
- ➔ Collection and use of intelligence to make informed risk decisions
- ➔ Understanding regulatory, international and other requirements related to incident response, investigations and reporting
- ➔ Adequacy of policies, crisis management and incident response plans
- ➔ Organizational decision making and communications
- ➔ Effectiveness of controls to detect security events
- ➔ Investigative and forensic capabilities
- ➔ Mitigation and recovery
- ➔ Staff awareness and training
- ➔ Communications with shareholders, law enforcement, employees, customers, the press and other third-parties
- ➔ Tracking losses and costs

These are just a few of the questions you need to consider before you experience a security incident. Waiting until an event occurs increases costs and exposure to brand damage and liability.

The first step to safeguarding your business is to know your organization's capability to react effectively and efficiently.

ENCURVE WORKS WITH YOU TO PROTECT
YOUR BRAND AND BUSINESS WHEN A
CRISIS OCCURS.
