November 5, 2010

Dear Colleagues –

We are assisting a company located in the greater Chicago area in recruiting information security consultants. Actual location is negotiable. Salary is based on experience.

Please find attached two job descriptions for security delivery consultants and penetration testing specialists. Please let me know if you have interest in either of these positions. Likewise, feel free to forward to anyone you think might be a good fit and interested.

Best regards,

Kent Anderson  
Managing Director

## SECURITY CONSULTANT – SECURITY DELIVERY

We are currently seeking a security consultant with a background in information security risk analysis, security and compliance audits, and general network design to serve as part of our team of professionals delivering professional consulting services to our customers.

Job responsibilities also include pre-sales, interfacing with account teams and overlay sales teams to educate and evangelize security offerings, as well as developing innovative security solutions to customers.

This position requires an innovative, out of box thinker mentality as well as adaptability to rapidly changing customer requirements or market conditions.

The candidate should have 4-5 years proven experience in delivering information security risk assessments against data security standards such as the PCI DSS, HIPAA, and US DoD DIACAP. Experience in developing high level network security architectures are a plus. The candidate should have delivered the services to clients in different verticals, specifically one of the following - retail, healthcare or government.

The following requirements are highly desirable:

- Knowledge and experience in performing compliance assessments against the PCI Data Security Standard.
- Knowledge and experience in designing secure network architectures in context of retail, healthcare, or government verticals.
- One or more of the following certifications: GSNA, CISM and other related certifications. Specialized degrees with a focus on information security are an acceptable substitute.
- Experience and ability to present in front of a varied audience, from technical to senior level management
- Self-starters and driven individuals who seek minimal directions
- Proven ability to work in teams and in dynamic environments

Two or more of the following experiences will be considered a plus :

- Experience working in data security practice of any of big 5 consulting groups or other well known security consulting organizations
- Experience working in retail environment and PCI Data Security Standard compliance requirements
- Experience working in or delivering services to state and local government IT groups.
- Prior experience in developing software and/or hardware to implement security technologies
- Applied knowledge in security compliance and regulations, risk analysis and risk mitigation
- Prior experience with system engineering and/or product development

The applicant should possess excellent oral and written communication skills. He/She should be actively contributing to the security industry research and knowledge sharing. The candidate should be passionate about data and information security and be willing to keep abreast of the latest developments/threats/attack and mitigation techniques for vulnerabilities.

## SECURITY CONSULTANT – PEN TESTING

We are currently seeking a security consultant with security assessment and penetration testing background to serve as part of our team of professionals delivering professional consulting services to our customers.

The candidate should have 4-5 years proven experience in delivering network and web application based security assessments and penetration testing. The candidate should have delivered the services to clients in different verticals specifically either of these - retail, healthcare and government.

The following requirements are highly desirable:

- Knowledge and experience in web application security assessment techniques both intrusive and non-intrusive.
- Knowledge and experience delivering security assessments (vulnerability assessments, risk assessments, network auditing ) as well as penetration testing
- One or more of the following certifications: CEH, GPEN, CISM and other related certifications.
- Experience and ability to present in front of a varied audience, from technical to senior level management
- Self-starters and driven individuals who seek minimal directions
- Proven ability to work in teams and in dynamic environments

Two or more of the following experiences will be considered a plus:

- Experience working in data security practice of any of big 5 consulting groups or other well known security consulting organizations
- Experience working in retail environment and PCI Data Security Standard compliance requirements
- Experience working in or delivering services to state and local government IT groups.
- Prior experience in developing software and/or hardware to implement security technologies
- Applied knowledge in security compliance and regulations, risk analysis and risk mitigation

The applicant should possess excellent oral and written communication skills. He/She should be actively contributing to the security industry research and knowledge sharing. The candidate should be passionate about data and information security and be willing to keep abreast of the latest developments/threats/attack and mitigation techniques for vulnerabilities.

## ABOUT ENCURVE, LLC

Encurve, LLC is an independent, international business risk consulting firm focused on protecting your organization and brand by creating security solutions for your business and risk requirements.

*Our job is to enable you to succeed.*

That means we don't sell you a pre-packaged solution. We start by collaborating with you to understand four critical elements: **Your business or mission, your threats, your risks and your needs** to deliver the results you require. Unlike many consulting firms, we don't leverage inexperienced consultants armed with canned checklists, designs and reports.

Encurve's multi-disciplinary team is board certified and licensed professionals such as Certified Information Security Manager (CISM) and Certified Protection Professionals (CPP) with experience as security practitioners making the same hard choices you do between risk, business requirements and tight budgets. Our team has extensive international experience solving the most difficult information and physical security problems across a wide range of industries. Our staff has extensive backgrounds in the military, government service, law enforcement and technical fields.

We are independent of any vendor or supplier and, therefore, provide unbiased advice and solutions.

*Our core capabilities include:*

↳ **Professional Security Consulting**

A wide range of solutions including assessments, policies, architectures, implementation testing and training

↳ **Compliance Services**

Due diligence and regulatory compliance required to protect your business

↳ **Physical Security**

Solving the most complex and demanding situations including our PROTECT ONDEMAND™ solutions for **remote, hostile, temporary** and **mobile** environments

↳ **Executive Advisory Services**

Providing the strategic and business focused analysis executive and security leaders require for due diligence, risk decisions and organizational optimization

↳ **Investigations & Incident Response**

Forensics, due diligence, litigation support, damage assessments and investigations

↳ **Security Business Development**

Assisting new and established security providers to create optimal and competitive offerings with professional and managed services and product offerings

**Regardless of your security requirements contact Encurve today to learn how we can help:
